Effective Study Methods

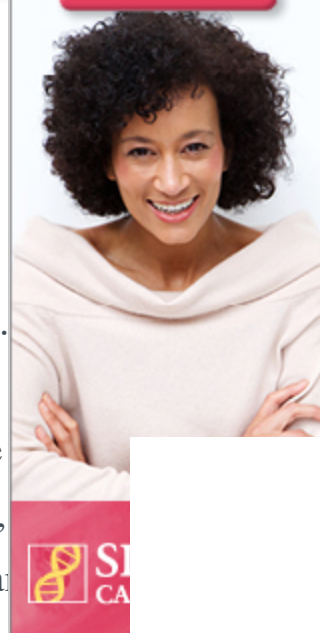

1105 Words • 3 Pages

**Recommended:** [Example Of Improving Memory](#)

We, as students, are often inundated with various coursework where we are expected to study from and be prepared to perform well on any given quizzes or exams. Over the course of a student's life, he or she eventually develops a personal study method that works best. Some people are better at establishing effective study methods, while some do not. Not one person studies exactly the same way. In terms of **psychology**, there are various concepts of **learning** and **memory** that are involved in the way a person studies. I, for one, am a huge believer in simply reading over the given study materials, and I end up getting

These methods are explained and provided with proper examples from the textbook provided in class.

Psychologists define learning as “a relatively permanent change in behavior, knowledge, capability, or attitude that is acquired through experience and cannot be attributed to illness, injury, or maturation” (E. Wood, G. Wood & Boyd, 2014, p. 145). Learning is essential in remembering and understanding key information whenever one is studying. While we are learning the information we read, watch, or hear, the information being studied are usually involved with memory, which is “a cognitive process that includes encoding, storage, and retrieval of information” (E. Wood et al., 2014, p. 179).

As mentioned earlier, I am a firm believer in studying the given materials by reading over them. However, there definitely is more to that than simply reading the materials. There are many study methods that I use to enhance my studying, and I believe these methods do help a lot. One really important method that I foll...

... a good grade is a great feat, and the feeling one gets from doing so is unlike any.

Students are often overwhelmed with various materials to study. Over the course of their education, students should have developed adequate study methods to assist themselves in getting good grades. Studying effectively involves various complex psychological terms and concepts and is most likely still being studied to this day. I, too, have devised my own study methods that help me do the best I possibly can in any exam. In the end, studying effectively boils down to the way you study and how much you study. If you are prepared to take on any task, you will clearly be the outright winner of the class, and it will only benefit you in the long run.

Forget What You Know About Good Study Habits Essay

537 Words | 2 Pages

Tests play a major role in a student's academic career: they determine where the student goes to college, which AP classes the student will be able to take, and so on.

Considering this information, it is vital to discover effective study methods that will enable students to retain the material longer and clearer. The article "Forget What You Know About Good Study Habits" by Benedict Carey presents the notion that efficacious studying must include diversity.

Reflective Analysis: I Career Anchors

1620 Words | 4 Pages

The capability of a person varies from each and every one. Some people can grasp easily but for some it may take time to get information to the mind. the learning styles are divided on the abilities of a person, how he grasps, how he understands the subject, is he capable of listening style, doing style or writing or reading style. In an environment

complex manner in which, and conditions under which, learners most efficiently and most effectively perceive, process, store, and recall what they are attempting to learn (James & Gardner, 1995). There are poor learners, quick learners, and theoretical learners. There is no person who can't learn anything, some might learn theories, some might learn through practices and some learn by seeing what the work is. Through the reflective analysis my passion for

The Relationship between Learning and Memory

1663 Words | 4 Pages

Learning to tie shoes and ride a bike requires the encoding, storing, and retrieving of past observations of the procedure. With a lot of practice, children master these skills so well that they are able to remember them the rest of their lives. Memory is the storing of information over time. It is one of the most important concepts in learning; if things are not remembered, no learning can take place. As a process, memory refers to the "dynamic mechanism associated with the retention and retrieval of information about past experiences" (Sternberg 260). We use our memory about the past to help us understand the present. The study of memory in psychology is used in different ways, as well as there are many different ways to study how memory works in humans. In psychology there are many tasks used to measure memory, and different types of memory storages that human's use, such as sensory storing, or short term storing.

Personal Learning Styles

828 Words | 2 Pages

Personal learning styles are highly complex and unique to specific individuals. It is often difficult to pinpoint an exact learning style. Though there are different categories, we often fine tune them to our own abilities. By examining our traits and tendencies we create a clearer understanding of how we process and learn information. With careful review,

The Importance Of Study Skills

1093 Words | 3 Pages

An important question to address when attempting to identify effective study strategies and their relationship with academic performance is, “What are study skills?” The term “study skills” can be defined as proficiency in identifying, organizing, memorizing, and using information in order to succeed academically (Proctor, Prevatt, Adams, Hurst, & Petscher, 2006). Activities identified as study skills include “time management, setting appropriate goals, selecting an appropriate study environment, employing appropriate note-
